

Errata:
Learning Word-to-Meaning Mappings in Logical Semantics

1. The first solution in Example 6 on page 129 (the second line from the bottom) should read:

$$\langle \lambda y^{e \rightarrow e \rightarrow t} z^e . yzx, y, \lambda y^{e \rightarrow e \rightarrow t} v^{(e \rightarrow e \rightarrow t) \rightarrow e \rightarrow t} . v(\lambda x^e z^e . yzx)z \rangle,$$

2. The first two lines on page 130 (Example 6) should be changed to:

Since $\lambda y^{e \rightarrow e \rightarrow t} z^e . yzx \prec_t \lambda y^{e \rightarrow e \rightarrow t} v^{(e \rightarrow e \rightarrow t) \rightarrow e \rightarrow t} . vyx$ and $\lambda y^{e \rightarrow e \rightarrow t} v^{(e \rightarrow e \rightarrow t) \rightarrow e \rightarrow t} . v(\lambda xz . yzx)z \succ_t \lambda y^{e \rightarrow e \rightarrow t} . yz$, the two solutions are incompatible ...

3. The line preceding Algorithm A on page 130 should be changed to:

A *subargument* of a term is either the term itself or a subargument of an argument.
